## 🌍 Chapter 1: The Common Rocket

- For years, crypto communities shared one dream – "We're going to the moon!"

But they all used the same weak rocket, pushing it over and over.

From Earth to the Moon it flew...

- But once it arrived, it was tired. Out of charge. Unable to go further.

The journey always stopped there.

## 🔧 Chapter 2: The Upgrade

Then came a new mind – a Crypto Engineer.

He saw the flaw. He had a vision.

He took the old rocket, rewired it, and infused it with Double HighVoltage.

⚡ A new power 🚀 A new momentum ⚡ A new destiny.

The result?

Double HighVoltage Rocket ⚡🚀⚡

The only rocket fully charged to go beyond the moon.
